

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings of claims in the application:

**Listing of Claims:**

1. (currently amended) A method for providing a plurality of service functions to a plurality of users by a storage system, comprising:
  - receiving a request by a user of said plurality of users for performance of a service function of said plurality of service functions;
  - checking if said service function is allowed by said storage system according to a usage constraint, said usage constraint comprising a storage area needed by said service function, said service function being allowed if the storage area needed by said service function is under a preset value specified by the usage constraint; and
  - when said service function is allowed, performing said service function by said storage system.
2. (original) The method of claim 1 wherein said usage constraint further comprises a user number limitation for said service function.
3. (original) The method of claim 1 wherein said receiving said request by said user is via a server provider system (SPS).
4. (original) The method of claim 1 wherein said usage constraint comprises all other storage areas needed by all current user of said service function on said storage system.
5. (original) The method of claim 4 wherein said usage constraint is an accumulation of storage areas of users of said service function.
6. (original) The method of claim 1 wherein all of said plurality of service functions are turned on in said storage system.
7. (currently amended) A method for providing a service function to a user by a storage system, comprising:
  - receiving a request by a user for performance of a service function;

checking if said service function is allowed by said storage system according to a usage constraint, said usage constraint comprising a storage area needed by said service function, said service function being allowed if the storage area needed by said service function is under a preset value specified by the usage constraint; and

when said service function is allowed, performing said service function by said storage system.

8. (original) The method of claim 7 wherein said usage constraint further comprises a user number limitation for said service function.

9. (currently amended) A service provider system for providing a plurality of service functions to a plurality of users, comprising:

a storage system comprising said plurality of service functions, wherein a service function of said plurality of service functions has a predetermined limit on a total capacity which is based on a number of said plurality of users that have access to said service function; and

a service provider server for providing said plurality of users with said plurality of service functions of said storage system.

10. (original) The service provider system of claim 9 further comprising, a second storage system comprising said plurality of service functions, wherein all service functions of said plurality of service functions have been activated for use.

11. (original) The service provider system of claim 9 wherein said storage system further comprises a user access information table for managing data of users of said plurality of users having access to said storage system.

12. (original) The service provider system of claim 9 wherein said service provider system further comprises a data management table including information for identifying a user of said plurality of users, information on said service function, and information for managing data on the user.

13. (original) The service provider system of claim 9 wherein storage system further comprises a user access information table comprising information for identifying a user of said plurality of users and a service function bit map for determining activated service functions of said plurality of service functions for said user.

14. (original) The service provider system of claim 13 wherein said user access information table further comprises an area capacity for each activated service function.

15. (currently amended) A storage system for providing a plurality of service functions to a plurality of users via a service provider system, comprising:

a user access information data structure indicating for a service function of said plurality of service functions selected users of said plurality of users that have access to said service function based on a total access capacity to said service function by said selected users, the total access capacity being under a preset value for said service function;

a controller for checking said user access information data structure, when receiving a request from said service provider system for access by a user of said plurality of users to said service function; and

a storage unit having a storage area for use by said service function, when said controller indicates said user has access to said service.

16. (original) The storage system of claim 15 wherein said user access information data structure further comprises a cumulative storage area value for some users of said plurality of users having access to said service function.

17. (original) The storage system of claim 16 wherein said controller checks for user access permission to said service function based on a result dependant upon a number of said some users having access and said cumulative storage area value for said some users.

18. (original) The storage system of claim 15 wherein said result is dependant upon a position with respect to a curve of cumulative storage capacity versus number of users, said curve representing a license from a vendor to said service provider.

19. (original) The storage system of claim 15 wherein said user access information data structure is a table.

20. (original) A method for providing a plurality of service functions on a plurality of storage systems to a plurality of users via a service provider system, said method comprising:

said service provider system receiving a request for performance of a service function of said plurality of service functions from a user of said plurality of users;

determining a selected storage system of said plurality of storage systems based on said user and said service function;

calculating a storage area needed by said service function; and

when said storage area added to a total storage area currently required by other users of said service function on said selected storage system does not exceed a predetermined total capacity for said service function on said selected storage system, using said storage area to perform said service function.

21. (original) A method of payment, using a computer, for services from a service provider system to a storage system, wherein said service provider system provides a plurality of service functions of said storage system to a plurality of users, said method comprising:

for a service function of said plurality of service functions, determining a set of limitations based on a total number of users of said service function and a total capacity of storage areas used by said total number of users;

setting a price for each limitation in said set; and

paying a given price for a selected limitation of said set, such that an actual number of users of said service function on said storage system and an actual total capacity of storage area used by said actual number of users does not exceed said selected limitation.

22. (original) The method of payment of claim 21 wherein said storage system checks that said actual number of users and said actual total capacity of storage areas used by said actual number of users does not exceed said limitation.

23. (currently amended) A licensing system of a storage system for monitoring a service provider system having a plurality of customers using a plurality of service functions, comprising:

said plurality of service functions stored on said storage system;

[[a]] an access table comprising authorized customers of said plurality of customers that have access to a service function of said plurality of service functions and a total capacity of storage area needed by said authorized customers when using said service function;  
and

a license checking routine for receiving a customer request for said service function from said service provider system, and determining if said customer request is within a license limit, said license limit having a plurality of combinations for said service function dependent on a number of users versus total storage capacity allowed for said number of users.

24. (original) The licensing system of claim 23 further comprising, rejecting said customer request if said customer request is outside said license limit.

25. (original) The licensing system of claim 23 wherein said plurality of combinations of said license limit are grouped into a plurality of sets, each set having an associated licensing fee.

26. (currently amended) A method for registering a new service function specified by a user to a service provider system, said service provider system coupled to a storage system having a controller provided with a plurality of service functions and enabled to control accesses to the plurality of service functions , the method comprising:

enabling the new service function specified by the user in an access information table connected to the controller;

calculating a total area, including [[a]] an area used by the new service function; and

when the total area does not exceed a predetermined value, registering the new service function in the data management table for the user.

27. (currently amended) A computer program product stored on a computer readable medium for providing a plurality of service functions to a plurality of users by a storage system, said computer program product comprising:

code for receiving a request by a user of said plurality of users for performance of a service function of said plurality of service functions;

code for checking if said service function is allowed by said storage system according to a usage constraint, said usage constraint comprising a storage area needed by said service function, said service function being allowed if the storage area needed by said service function is under a preset value specified by the usage constraint; and

code for when said service function is allowed, performing said service function by said storage system.

28. (currently amended) A computer program product stored on a computer readable medium for licensing a service provider system, having a plurality of customers using a plurality of service functions, by a storage system, said computer program product comprising:

code for said plurality of service functions stored on said storage system;

code for [[a]] an access table comprising authorized customers of said plurality of customers that have access to a service function of said plurality of service functions and a total capacity of storage area needed by said authorized customers when using said service function; and

code for a license checking routine for receiving a customer request for said service function from said service provider system, and determining if said customer request is within a license limit, said license limit having a plurality of combinations for said service function dependent on a number of users versus total storage capacity allowed for said number of users.
